

ComEd

An Exelon Company

powering lives

**Martin Montes, ComEd
Vice President of Large Customer Services
May 5, 2021**

Whether its new construction, expansions, or renovations, include ComEd early in the planning stages to integrate clean energy options such as energy efficiency incentives, solar, and other beneficial electrification solutions.

Developers, building owners, and financiers have the opportunity to lead the reimagination and future of our communities. Let us help you realize your vision.

ComEd Energy Efficiency Program Overview

FREE Assessments

- Whole facilities
- Virtual walk-thru option

Incentives

- Lighting
- HVAC systems
- Energy Management Systems
- IT rooms
- New construction
- LED streetlights
- Variable Speed Drives

Instant Discounts

- Lighting
- HVAC
- Forklift battery chargers

Optimization

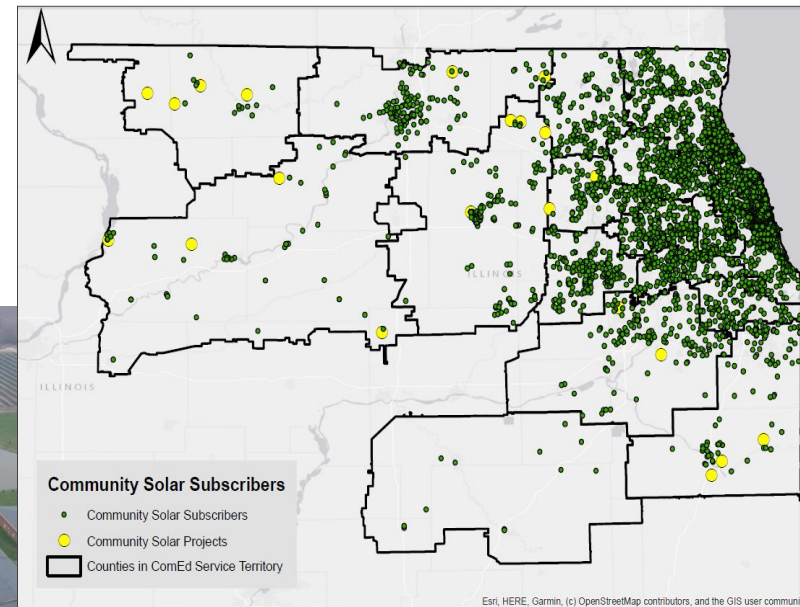

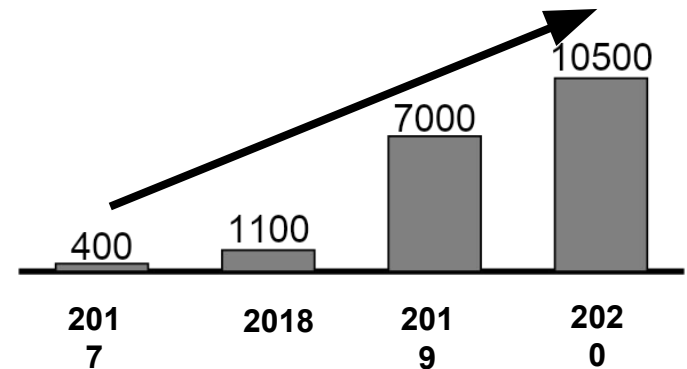

- Whole-building retro-commissioning
- Rooftop units
- Refrigeration and cooling
- Compressed air

Distributed Generation

- DER Interconnection volume continues to climb year over year driven by the Future Energy Jobs Act
- 2020 resulted in ~10,500 new interconnections (183 MW), primarily rooftop solar along with the first community solar projects in Northern Illinois
- 700% increase in Community solar subscribers since 1/1/2021 with over 7,000+
- Forecasting record Distributed Generation Rebates in 2021 ~59 Million driven by large community solar projects

Annual Interconnections Completed

Chicago Ordinance and ICC Issuance of NOI

Make Ready Ordinance March 13, 2019, Ald. Brendan Reilly, 42nd Ward:

- *“It is critical to the City of Chicago’s continued economic growth and development that it takes steps to ensure that electric vehicle charging is available and convenient for the coming wave of owners embracing this sustainable technology...”*

August 19, 2020: ICC issued a NOI regarding the impact of electricity rate design on transportation electrification and other forms beneficial electrification

Given this topic, a key obstacle to address together is....

the integration of EE systems and solar into pre-construction planning and RCx of already operating infrastructure in conjunction with the alignment of customer load with abundantly available clean energy.

To address this challenge, ComEd is committed to proactively engage and be the trusted partner of C&I customers who are seeking new energy solutions
